## EPWORTH SLEEPINESS SCALE

The Epworth Sleepiness Scale (ESS) was developed and validated by Dr. Murray Johns of Melbourne, Australia. It is a simple, self-administered questionnaire and widely used by sleep professionals in quantifying the level of daytime sleepiness.

(Johns, M.W. "A new method for measuring daytime sleepiness: The Epworth Sleepiness Scale." *Sleep* 14 (1991): 540-545.)

NAME \_\_\_\_\_

AHS # \_\_\_\_\_

How likely are you to doze off or fall asleep in the following situations, in contrast to feeling 'just tired'? This refers to your usual way of life at present and in the recent past. Even if you have not done some of these things recently, try to work out how they would have affected you.

Use the following scale to choose the most appropriate number for each situation:

**0 = Would never doze**

**2 = Moderate chance of dozing**

**1 = Slight chance of dozing**

**3 = High chance of dozing**

<b>SITUATION</b>	<b>CHANCE OF DOZING</b>
Sitting and reading	_____
Watching television	_____
Sitting, inactive in a public place (e.g. theatre, meeting)	_____
As a passenger in a car for an hour without a break	_____
Lying down to rest in the afternoon when circumstances permit	_____
Sitting and talking to someone	_____
Sitting quietly after lunch without alcohol	_____
In a car, while stopped for a few minutes in traffic	_____
